

MEDICARE AI

Application Summary Report · Version 1.0 · May 2026 · React / Claude Sonnet 4 Powered

637	6	5	6	6
Lines of Code	Navigation Tabs	Hospitals Listed	Doctors Listed	Vitals Monitored

1. EXECUTIVE SUMMARY

MediCare AI is a comprehensive, AI-powered personal health management application built as a **single-file React component** (MediCare_AI.jsx, 637 lines). It combines patient health tracking, hospital and doctor discovery, medical records management, medication reminders, and a live AI chat assistant — all within an intuitive **mobile-first interface targeting the Indian healthcare market**.

The application integrates directly with Anthropic's **Claude Sonnet 4 API** to deliver real-time, context-aware medical guidance personalised to each patient's profile, with INR-denominated fees, Bengaluru-based hospital data, and **108 emergency integration**.

APPLICATION AT A GLANCE

Metric	Value
Total Lines of Code	637
Primary Technology	React (JSX) + Anthropic Claude Sonnet 4 API
Navigation Tabs	6 (Home, Hospitals, Doctors, Records, AI Chat, Profile)
Hospitals Listed	5 (Apollo, Manipal, Narayana, Fortis, Columbia Asia)
Doctors Listed	6 across multiple specialties
Active Medications Tracked	3
Health Records	4 recent diagnostics
Vitals Monitored	6 (BP, Blood Sugar, HR, BMI, SpO2, Temperature)
AI Model Used	claude-sonnet-4-20250514

2. FEATURE OVERVIEW

The app is organized into six tabs accessible via a fixed bottom navigation bar. Below is a summary of each module's capabilities.

2.1 HOME DASHBOARD

- ◆ Personalised welcome banner with patient name and blood group

- ◆ Real-time vitals grid: BP, Blood Sugar, HR, BMI, SpO2, Temperature with colour-coded status
- ◆ Medication tracker with pill counts; red badge fires when ≤ 3 pills remaining
- ◆ Upcoming appointment cards with doctor avatar, specialty, date and type badge

2.2 HOSPITAL FINDER

- ◆ 5 hospitals listed with distance, specialty, bed count, ER status, and wait time
- ◆ Filter by type: Multi-specialty / Super-specialty / General
- ◆ One-tap call action for each hospital

2.3 DOCTOR BOOKING

- ◆ 6 specialists listed; availability status, next slot, experience, and fee displayed
- ◆ Booking modal with confirmation flow; waitlist join for unavailable doctors

2.4 HEALTH RECORDS

- ◆ 4 diagnostic records stored: Blood Test, ECG, MRI Brain, Chest X-Ray
- ◆ Counter summary: 24 reports, 8 prescriptions, 6 consulting doctors
- ◆ Download PDF and Ask AI buttons on each record

2.5 AI HEALTH CHAT

- ◆ Powered by Claude Sonnet 4 via Anthropic /v1/messages API
- ◆ Patient context (conditions, allergies, blood group) injected into every system prompt
- ◆ Quick-prompt buttons: blood sugar, Metformin side effects, ER guidance, diabetes diet

2.6 HEALTH PROFILE

- ◆ Full patient record with conditions, allergies, emergency contact, insurance details
- ◆ Toggle settings: medication reminders, appointment alerts, record sharing, health tips
- ◆ Inline edit mode for profile updates

3. TECHNICAL ARCHITECTURE

Layer	Detail
Framework	React 18 (functional components, useState / useEffect / useRef)
AI Integration	Anthropic /v1/messages — claude-sonnet-4-20250514, max_tokens: 1000
Styling	Inline CSS with centralised COLORS token object; mobile-first
Data	Hard-coded seed arrays for hospitals, doctors, meds, records, vitals
Icons	Tabler Icons via CDN class refs (ti-*)
Emergency	108 call banner + nearest ER info visible on every screen

CLAUDE API INTEGRATION

Model	claude-sonnet-4-20250514
Endpoint	POST https://api.anthropic.com/v1/messages
Max Tokens	1,000 per call
Context Injection	Patient conditions, allergies, blood group in every system prompt
Q&A; Mode	Follow-up questions with full context maintained per session

4. KEY DESIGN HIGHLIGHTS

- ◆ **Zero-install, single-file architecture** — entire application in one 637-line React component with no build step required for prototype deployment.
- ◆ **Indian healthcare market focus** — INR fees, Bengaluru hospital database, 108 emergency integration, and context-aware guidance for Indian health conditions.
- ◆ **Privacy-first AI context** — patient data (conditions, allergies, blood group) is injected at the session level; no external data persistence.
- ◆ **Mobile-first responsive design** — designed for 480×900px mobile viewport with Tabler icon CDN integration and colour-coded vitals grid.
- ◆ **Real-time medication alerts** — automated red badge when pill count reaches ≤ 3, ensuring patients never miss refill windows.
- ◆ **Dual-action health records** — every diagnostic record supports both PDF download and one-click AI analysis via Claude Sonnet 4.

5. SEEDED DATA SUMMARY

Data Category	Count	Examples
Hospitals	5	Apollo, Manipal, Narayana, Fortis, Columbia Asia

Doctors	6	Multiple specialties including Cardiology, Neurology
Medications	3	Active prescriptions with pill counts & schedules
Records	4	Blood Test, ECG, MRI Brain, Chest X-Ray
Vitals	6	BP, Blood Sugar, HR, BMI, SpO2, Temperature
Quick Prompts	4	Blood sugar, Metformin, ER guidance, diabetes diet
